

Welcome to PureTidings Desktop & Mobile

PureTidings is a modern, high-performance, and completely private news, RSS, and newsletter intelligence workstation built with **Tauri v2** and **Rust**. It puts you in complete control of your information flow, cutting through the noise and delivering the content you care about directly to your desktop or mobile device.

By operating entirely local-first, PureTidings eliminates expensive monthly SaaS subscriptions, cloud middleman proxies, and privacy-invasive tracking. All feed parsing, full-text web scraping, transcript queries, and IMAP email connections execute natively from your own machine using your residential IP address.

What Makes PureTidings Different?

- **Universal IMAP Email & Newsletter Hub:** Ingest Substack newsletters, financial roundups, and developer digests directly from your email account alongside standard RSS channels, complete with bidirectional read status synchronization (\Seen) and an isolated, anti-hotlink sandboxed viewer.
- **Nextcloud & WebDAV Cross-Device Cloud Sync:** Seamlessly synchronize your complete feed hierarchy, read marks, starred favorites, keyword rules, and inboxes across Windows, macOS, Linux, and Android using your own Nextcloud or WebDAV server with zero cloud lock-in.
- **Desktop Browser Satellite Companion:** Seamlessly integrate your desktop browser workflow (Google Chrome, Brave, Edge) with the PureTidings Desktop application via a zero-latency local loopback bridge (127.0.0.1:41789), featuring 1-click feed subscriptions and live bidirectional read and favorite synchronization.
- **Zero-Subscription AI Intelligence (BYOK):** Power your reading workflow with on-demand article summaries, executive briefings, and YouTube video transcript digests (TL;DW) using your own Google Gemini API key.
- **Unlimited IndexedDB Persistence:** Eliminates browser storage quotas, ensuring hundreds of rich email newsletters and extensive RSS archives are safely preserved without write errors.
- **Distraction-Free Floating Workstation:** A clean, reader-friendly environment powered by Mozilla Readability with a free-floating, mouse-resizable and draggable window, embedded YouTube player, and pristine multi-format export (Markdown, HTML, Plain Text).
- **Native Multi-Language Support:** Seamless live switching between English, German, Spanish, and French.

PureTidings is available for **Windows, macOS, Linux, Chromebook**, and **Android**.
